

Delivery Management and Proof of Delivery

CenGlobal provides a flexible and cost effective delivery management solution. The solution can work stand alone or can be fully integrated to CargoWise and other logistics and ERP systems.

CargoWise

Our cloud based delivery management solution provides capacity management (by weight and / or cube) and route planning. Low cost mobile phones can be used for order tracking, driver communications and satellite navigation. The system can provide email or SMS delivery alerts to customers and provides a 'sign on glass' facility, along with image capture, to record deliveries. Alerts can be provided if the driver strays off his path or schedule, or when the vehicle is near the destination or is approaching the depot.
