

Vehicle Tracking and Telematics

Our cloud based tracking and telematics platform is designed to provide a cost effective and practical solution to reduce costs, improve safety and productivity and improve customer service and compliancy.

Our open platform supports a range of telematics 'black boxes' as well as our mobile CCTV systems. Full tablet, Android and Iphone support is available.

We monitor fuel usage and economy, driver behaviour and many other parameters including engine temperature, oil and coolant levels, battery status. Full CanBus support is available, as is automatic tacho downloads and driver identification.

Offices in UK, Middle East and Far East
